Read the Budapest Open Access Initiative

An old tradition and a new technology have converged to make possible an unprecedented public good. The old tradition is the willingness of scientists and scholars to publish the fruits of their research in scholarly journals without payment, for the sake of inquiry and knowledge. The new technology is the internet. The public good they make possible is the world-wide electronic distribution of the peer-reviewed journal literature and completely free and unrestricted access to it by all scientists, scholars, teachers, students, and other curious minds. Removing access barriers to this literature will accelerate research, enrich education, share the learning of the rich with the poor and the poor with the rich, make this literature as useful as it can be, and lay the foundation for uniting humanity in a common intellectual conversation and quest for knowledge.

For various reasons, this kind of free and unrestricted online availability, which we will call **open access**, has so far been limited to small portions of the journal literature. But even in these limited collections, many different initiatives have shown that open access is economically feasible, that it gives readers extraordinary power to find and make use of relevant literature, and that it gives authors and their works [vast and measurable](#) new [visibility](#), [readership](#), and [impact](#). To secure these benefits for all, we call on all interested institutions and individuals to help open up access to the rest of this literature and remove the barriers, especially the price barriers, that stand in the way. The more who join the effort to advance this cause, the sooner we will all enjoy the benefits of open access.

The literature that should be freely accessible online is that which scholars give to the world without expectation of payment. Primarily, this category encompasses their peer-reviewed journal articles, but it also includes any unreviewed preprints that they might wish to put online for comment or to alert colleagues to important research findings. There are many degrees and kinds of wider and easier access to this literature. By "open access" to this literature, we mean its free availability on the public internet, permitting any users to read, download, copy, distribute, print, search, or link to the full texts of these articles, crawl them for indexing, pass them as data to software, or use them for any other lawful purpose, without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. The only constraint on reproduction and distribution, and the only role for copyright in this domain, should be to give authors control over the integrity of their work and the right to be properly acknowledged and cited.

While the peer-reviewed journal literature should be accessible online without cost to readers, it is not costless to produce. However, experiments show that the [overall costs](#) of providing open access to this literature are far lower than the costs of traditional forms of dissemination. With such an opportunity to save money and expand the scope of dissemination at the same time, there is today a strong incentive for professional associations, universities, libraries, foundations, and others to embrace open access as a means of advancing their missions. Achieving open access will require new cost recovery models and financing mechanisms, but the significantly lower overall cost of dissemination is a reason to be confident that the goal is attainable and not merely preferable or utopian.

To achieve open access to scholarly journal literature, we recommend two complementary strategies.

- I. Self-Archiving:** First, scholars need the [tools and assistance](#) to deposit their refereed journal articles in open electronic archives, a practice commonly called, self-archiving. When these archives conform to standards created by the [Open Archives Initiative](#), then search engines and other tools can treat the separate archives as one. Users then need not know which archives exist or where they are located in order to find and make use of their contents.
- II. Open-access Journals:** Second, scholars need the means to launch a new generation of journals committed to open access, and to help existing journals that

A Sample of Journals Using Open Journal Systems

This is not a comprehensive list of the over 11,500 titles using OJS (as of December 2011), but includes those who have indicated an interest in being listed and is intended to illustrate the diversity of journals.

Because the list is not comprehensive, we cannot recommend journals.

If your OJS is not listed, you can register it.

LEADING A TRANSFORMATION IN RESEARCH COMMUNICATION

HOME ABOUT PUBLICATIONS PUBLISH SUPPORT US

Welcome to PLoS

We are a nonprofit [publisher](#) and [advocacy organization](#). Our [mission](#) is to accelerate progress in science and medicine by leading a transformation in research communication. [Everything](#) that we publish is [open-access](#) - freely available online for anyone to use. Sharing research encourages progress, from protecting the biodiversity of our planet to finding more effective treatments for diseases such as cancer.

Latest from PLoS

Protect public access to research in the U.S.

JANUARY 12, 2012

There's a bill before Congress called the [Research Works Act](#) that if passed could reverse the popular and successful NIH open access policy and block similar developments at other federal agencies. In a recent [New York Times Opinion Piece](#), PLoS co-founder Mike Eisen argued that rather than "rolling back public access, Congress should move to enshrine a simple principle in United States law: if taxpayers paid for it, they own it". We urge you to contact your representative and let them know that you oppose this retrograde step - simple guidelines (template letters, contact information) are available from the [Alliance for Taxpayer Access](#).

About BASE

BASE is one of the world's most voluminous search engines especially for academic open access web resources. BASE is operated by Bielefeld University Library.

As the open access movement grows and prospers, more and more repository servers come into being which use the "Open Archives Initiative Protocol for Metadata Harvesting" (OAI-PMH) for providing their contents. BASE collects, normalises, and indexes these data. BASE provides more than 30 million documents from more than 2,000 sources. You can access the full texts of about 75% of the indexed documents. The Index is continuously enhanced by integrating further OAI sources as well as local sources. Our OAI-PHM Blog communicates information related to harvesting and aggregating activities performed for BASE.

BASE is a registered OAI service provider and contributed to the European project "Digital Repository Infrastructure Vision for European Research" (DRIVER). Database managers can integrate the BASE index into your own local infrastructure (e.g. meta search engines, library catalogues) via an interface.

In comparison to commercial search engines, BASE is characterised by the following features:

- Intellectually selected resources
- Only document servers that comply with the specific requirements of academic quality and relevance are included
- A data resources inventory provides transparency in the searches
- Discloses web resources of the "Deep Web", which are ignored by commercial search engines or get lost in the vast quantity of hits.
- The display of search results includes precise bibliographic data
- Several options for sorting the result list
- "Refine your search result" options (by author, subject, DDC, year of publication, collection, language and document type)
- Browsing by DDC (Dewey Decimal Classification) and document type.

Open Archives Initiative Protocol for Metadata Harvesting

[Home](#)[Projects](#)[Specifications](#)[Community](#)[About OAI](#)

Open Archives Initiative -> PMH

Interoperability through Metadata Exchange

The Open Archives Initiative Protocol for Metadata Harvesting (OAI-PMH) is a low-barrier mechanism for repository interoperability. *Data Providers* are repositories that expose structured metadata via OAI-PMH. *Service Providers* then make OAI-PMH service requests to harvest that metadata. OAI-PMH is a set of six verbs or services that are invoked within HTTP.

NIH Public Access Policy Details

The NIH Public Access Policy implements Division G, Title II, Section 218 of PL 110-161 (Consolidated Appropriations Act, 2008). The law states:

The Director of the National Institutes of Health shall require that all investigators funded by the NIH submit or have submitted for them to the National Library of Medicine's PubMed Central an electronic version of their final, peer-reviewed manuscripts upon acceptance for publication, to be made publicly available no later than 12 months after the official date of publication: Provided, That the NIH shall implement the public access policy in a manner consistent with copyright law.

Published 25 January 2012 | POST notes POST PN 397

Authors: Chandrika Nath

Topic: Data protection, Research and innovation

The internet has transformed the nature of scientific research, opening up new ways to collect, use and disseminate scientific information. This has led to increased demand for access to such information. Open Access (OA) to scientific journal publications means making them freely available online, rather than charging readers to view them. OA to research data means making research data more widely available for re-use by others to support research, innovation and wider public use.

[House of Commons Library](#)
The House of Commons Library provides research, analysis and information to MPs and their staff.

If you have any comments or suggestions for the Commons Library, please contact papers@parliament.uk

Please note, authors are not responsible for the contents of the general public.

[House of Lords Library](#)
The House of Lords Library provides research and information services to Lords and their staff.

The top banner image shows a dimly lit room. On the left, a person is seated in a chair, looking towards a window that lets in warm light. On the right, a door is slightly ajar, also emitting a warm glow. The overall mood is contemplative and somewhat somber.

OPEN AND SHUT?

Заявление ИФЛА 15 апреля 2011

Даже оптимально обеспеченная библиотека не может себе позволить приобрести все необходимые материалы... Такая ситуация ... в значительной степени касается библиотек с (ограниченным бюджетом или совсем без него) развивающихся стран...

Авторы...: их работу не видят и не могут оценить коллеги

Читатели не могут получить доступ ко всей необходимой им научной литературе...

OPEN ACCESS IN FP7

Reimbursement of Open Access publication costs in FP7

In the Seventh Framework Programme (FP7), 'gold' Open Access fees (i.e. 'Open Access publishing' and 'author pays' fees) are eligible for reimbursement. Details can be found in the FP7 model Grant Agreement:

Reimbursement of publication costs  191KB ('paid' Open Access), article II.16.4 'other activities'.

Open Access Pilot in FP7

In August 2008, the European Commission launched the Open Access Pilot in FP7 that will run until the end of the Framework Programme. It aims to ensure that research results funded by the EU citizen are made available to the population at large for free. In this way, Open Access is considered a way to improve the EU's return on research and development (R&D) investment.

Under the Open Access pilot, FP7 grant recipients in seven areas (energy, environment, health, information and communication technologies [only cognitive systems, interaction, and robotics], research infrastructures [only e-infrastructure], science in society, and socioeconomic sciences and humanities) are expected to:

- deposit peer-reviewed research articles or final manuscripts resulting from their FP7 projects into an online repository;
- make their best effort to ensure open access to these articles within either 6 months (health, energy, environment, information and communication technologies, research infrastructures) or 12 months (science in society, socioeconomic sciences and humanities) after publication.

The foreseen embargo period of 6 or 12 months allows scientific publishers to ensure a profit on

Open Access Policies

“The goal of university research is the creation, dissemination, and preservation of knowledge. At Harvard, where so much of our research is of global significance, we have an essential responsibility to distribute the fruits of our scholarship as widely as possible.”

Steven E. Hyman
Provost of Harvard University

By means of Harvard's Open Access Policy, faculty authors in [participating schools](#) grant the university a nonexclusive, irrevocable right to distribute their scholarly articles for [any non-commercial purpose](#).

[Scholarly articles](#) provided to the university are stored, preserved, and made freely accessible in digital form in [DASH](#), Harvard University Library's open access repository. The repository has the institution of Harvard standing behind it to ensure its availability, longevity, and functionality.

If you are a Harvard faculty member and have questions about when and how the policy applies to your work, review the [open access policy guide](#).

If you are considering adopting an open access policy at your institution, we encourage you to download and review this model policy language:
