

II PhD Conference
"Transparency and Accountability in Scientific Research"
Kyiv-Mohyla Academy Doctoral School
January 31, 2013 – February 4, 2013

SHADOW ECONOMY OF UKRAINE

Oksana Nezhyvenko
PhD candidate in Finance
Doctoral School of the NaUKMA,
Program "Finance"

Research supervisors

- Research supervisor – Svitlana Shumska,
Candidate of economic sciences,
Associate Professor, National University of “Kyiv-Mohyla
Academy”
Institute of Economic Forecasting, NASU, UKRAINE
- Research co-supervisor – Philippe Adair,
PhD in economics,
Associate Professor, University Paris XII Val de Marne, FRANCE

Research questions, purpose of research

- There is always some kind of economy “in shadow”
- SE – main feature of the economy in transition
- Significant SE – characteristic of the “survival” economy
- Large-scale or complicated investments are impossible under such circumstances
- The most common reasons for business activities taking place in shadow:
 - burdensome and costly **government regulations**
 - level and administrative complexity of **taxation**

The **purpose** of this research is to define main factors of the existence of a SE in Ukraine and to identify the ways to reduce its size.

Methodology

- Macroanalysis – MIMIC method
 - linking the unobserved variables to observed indicators
 - defining factors that influence the SE
- Microanalysis
 - econometric micro-simulation in order to model the ways to reduce the SE
 - the methodology of the International Labour Organization
 - information on general household income and expenditure, households production, purchases of goods and services from individuals
 - information for measuring the SE
 - provided by the State Committee of Statistics of Ukraine with 13 000 surveyed participants

Tendency in the research of SE

- Main approaches:
 1. Direct (voluntary replies, tax auditing, compliance methods)
 2. Indirect (macroeconomic)
 1. National income \neq National expenditures
 2. Official \neq Actual labour force
 3. Transactions approach
 4. Currency demand approach
 5. Physical input (electricity consumption) method
 3. Model approach

Research results

- Researched the basic and main literature on the topic.
- Analyzed the situation of SE in Ukraine.
- Analyzed the situation of SE in Europe.
- Analyzed the SE in Ukraine in the context of European integration.
- Compared SE in Ukraine and Romania
- Participated in scientific conferences on the topics mentioned above in Ukraine, Finland, and Slovenia.

Features of SE of Ukraine

- High taxation
- Heavy regulation
- Declining “tax morality”
- Size of the businesses in shadow
- Sectors of the businesses in shadow
- Disputes in legislation
- Distribution of Society

Size of SE for European countries, 2010

Difficulties

- Getting necessary statistics
- Dependency of methodology on statistics
- Interdisciplinary study

Thank you for attention!

Q&A
