Open Science Monitor

[Home](#)[About](#)[Open Access to Publications](#)[Open Research Data](#)[Open Scholarly Communication](#)[Citizen Science](#)[Drivers & Barriers](#)

Open science represents an approach to research that is collaborative, transparent and accessible. Open science occurs across the research process and there are many different activities that can be considered part of this evolution in science. The open science monitor tracks trends in areas that have consistent and reliable data.

<http://ec.europa.eu/research/openscience/index.cfm?pg=home§ion=monitor>

Use the wheel to explore open science characteristics and indicators. ▶▶

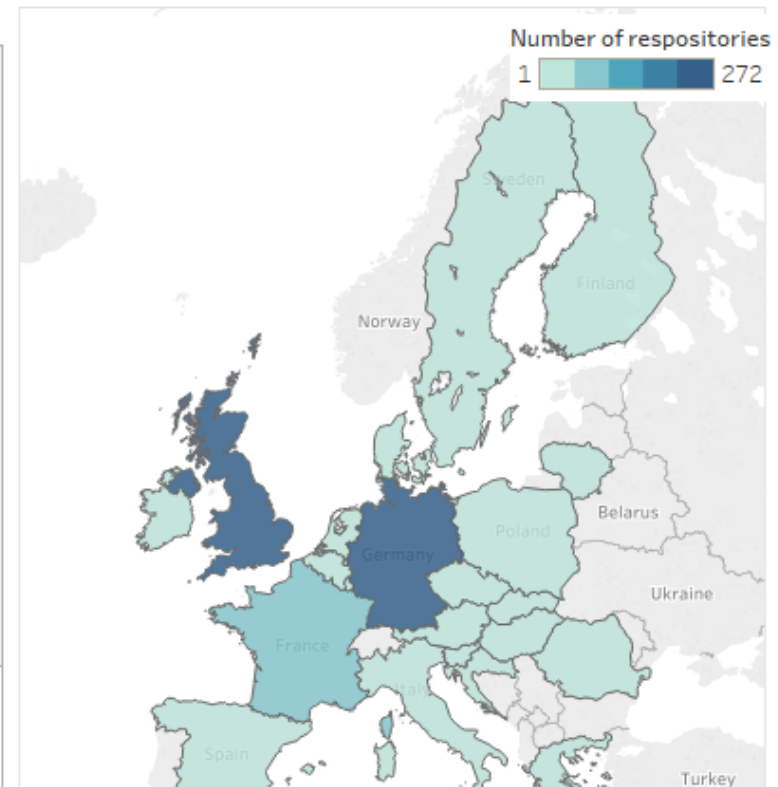

YOUR FEEDBACK

Number of data repositories

This visualisation shows the number of data repositories recorded in re3data.org. Repositories can cover multiple subjects, and be run from multiple countries.

Focus on one or more countries or subjects by selecting them on the barcharts. The CTRL key can be used to select multiple bars.

To reset, use the reset button in the bar below.

<http://ec.europa.eu/research/openscience/index.cfm?section=monitor&pg=researchdata#1>

Funder policies on data sharing

Indicator Data

How does GenBank contribute to open science?

GenBank is a data-type specific open data repository that holds biological sequence data that is freely available for (re)use by the scientific community. Developed before the world wide web, it is one of the earliest open scientific databases, and the amount of data stored in it continues to grow.

How does GenBank work?

GenBank is one of three nodes of the INSDC; the other two nodes are the ENA, and the DDBJ. Scientists can submit sequence data to any of the three nodes, regardless of country of origin. Submissions come from both individual laboratories, and also large-scale sequencing centers. The nodes act as mirrors for the data, ensuring the data are stored in multiple places and are always available. Once the data are shared across nodes only the accession number reveals the original submission node. While the underlying data is the same at each node, the graphical representations, and possible analyses that can be done on the websites, vary across the nodes. GenBank processes 80-85% of the submissions amongst the three nodes.

What coverage does GenBank have?

DNA sequence data is uploaded to GenBank and used by scientists from all over the world.

[Download the full case study](#)

How supportive would you be of a national mandate for open data?

Are you aware of any research data that is free to access, reuse, repurpose, and redistribute?

Source: The State of Open Data, Digital Science Report (2016).

Retrieved: December 23, 2016. Figures have been redrawn from the originals.

The State of Open Data survey was run by figshare, Springer Nature and Digital Science in 2016. The aim of the survey was to understand researcher's attitudes and experiences in working with data, sharing it and making it open; 2,000 researchers responded from a variety of countries and disciplines.

Key findings from new FORS report on data sharing and re-use

Between November 2016 and February 2017, [FORS](#), the Swiss Centre of Expertise in the Social Sciences, conducted an online survey of social science researchers in Switzerland to better understand researchers' attitudes, practices, and needs specifically regarding data sharing and re-use.

Here are some key findings:

- Across disciplines, around 80 percent of researchers generally consider the sharing of research data to be very important.
- More than two-thirds of the researchers stated that they had already shared data.
- Data sharing is most common amongst colleagues inside the same institution and within researchers' broader networks.
- Conditions most cited for sharing data include being informed about the projects that other researchers carry out based on one's data and the desire to be cited for the use of one's data by others.
- Re-using quantitative data is much more common than re-using qualitative data.
- There is a large interest in and strong need for additional services and materials in the area of data management, especially for data management planning, data preparation and cleaning, and security, storage and backup.

[Career profiles and related data management skills](#)[DC 101 training materials](#)[Disciplinary RDM training](#)[RDM for librarians](#)[Skills frameworks](#)[Data management courses and training](#)

Training and reference materials

In an effort to build capacity and to improve the sustainability of current and emerging curation training materials, the DCC seeks to identify and promote training materials available to those charged with developing and/or delivering RDM training within their institutions. The DCC is keen to cooperate with other training providers to share knowledge and resources and to reduce duplication of effort across the sector.

Our generic [DC 101](#) training materials are available to reuse as the basis for disciplinary or institutional-specific training. We have also developed RDM training aimed specifically at [librarians](#) and research administrators.

Many others have also produced training materials that are free for use and may be repurposed:

- [Facilitate Open Science Training for European Research \(FOSTER\) training portal](#) is an e-learning platform that brings together the best training resources for those who need to know more about Open Science, or who need to develop strategies and skills for implementing Open Science practices in their daily workflows. Here you will find a growing collection of training materials to meet the needs of many different users, from early-career researchers, to data managers, librarians, funders, and graduate schools.
- [VADS4R](#) developed a selection of learning materials, examples and quizzes relating to RDM and curation aimed at postgraduate students and early careers researchers in the visual arts. Some nice advice and examples of Technical Plans for those applying for AHRC funding.
- Network of Data and Information Curation Communities (NeDICC) [Introduction to the basics of research data](#) is an animated video that explains the basics of research data. This video is recommended background material for students planning to attend a workshop on research data management. Feedback from previous workshops have

Research Data Management and Sharing

About this course: This course will provide learners with an introduction to research data management and sharing. After completing this course, learners will understand the diversity of data and their management needs across the research data lifecycle, be able to identify the components of good data management plans, and be familiar with best practices for working with data including the organization,

SPOTLIGHT

DRYAD and DANS partner for long-term preservation research data

Dryad and DANS announce a new collaboration to ensure long-term preservation and accessibility to curated scientific data. Over 50,000 researchers who have already deposited research data with Dryad can count on continuous open access to their data packages with an extra layer of security and recoverability as a result of this partnership.

Can we help?

4TU. Centre for Research Data...

4TU.ResearchData (previously known as 3TU.Datacentrum) offers the knowledge, experience and the tools to archive research data in a standardized, secure and well-documented manner. It provides the research community with:

- A long-term archive for storing scientific research data
- Permanent access to, and tools for reuse of research data
- Advice and support on data management

4TU.ResearchData currently hosts thousands of datasets. To see examples please visit: <http://data.4tu.nl>.

...for you

- Upload your dataset
- Increase your visibility
- Be citable with a digital object identifiers (DOI)
- Comply to funder and institution requirements
- Increase the reuse of your data for new research questions or for verification
- Link your publication to the underlying data.

Research shows that enhanced publications are cited more than publications without links to the underlying data.

RDM Toolkit - Download It!

Case Studies. Model RDM Policy. Executive Briefing.

The LEARN Project has several resources to help Research Performing Institutions manage their research data. Using the **LERU Roadmap for Research Data** as a starting point, LEARN has produced the following freely-accessible materials.

Toolkit of Best Practice for Research Data Management

Our Toolkit includes 23 Case Studies covering topics such as Policy, Advocacy and Costs, a Model RDM Policy and an Executive Briefing in six core languages.
