# Співпраця ABE/IPS з науковими бібліотеками в Україні: досвід та перспектива

Богдан Чубак /Bogdan Czubak/  
менеджер проектів

# ABE-IPS

- ◆ ABE і IPS засновані в 1990 в Польщі
- ◆ Юридичний статус ТОВ
- ◆ 30 представників
- ◆ 2009 засновано ТОВ “АБЕ Маркетинг” в Україні

У 2011 виникла об'єднана марка **ABE-IPS**

**President Obama Highlights Scientific Research in SOTU**  

"We know that the nation that goes all-in on innovation today will own the global economy tomorrow. This is an edge America cannot surrender. Federally-funded research helped lead to the ideas and inventions behind Google and smartphones. That's why Congress should undo the damage done by last year's cuts to basic research so we can unleash the next great American discovery — whether it's vaccines that stay ahead of drug-resistant bacteria, or paper-thin material that's stronger than steel."

## Society History

The American Physical Society was founded on May 20, 1899, when 36 physicists gathered at Columbia University for that purpose. They proclaimed the mission of the new Society to be "to advance and diffuse the knowledge of physics", and in one way or another the APS has been at that task ever since.

**Early Years: Journals Added to Meetings**  
In the early years, virtually the sole activity of the APS was to hold scientific meetings, initially four per year. In 1913, the APS took over the operation of the *Physical Review*, which had been founded in 1893 at Cornell, and journal publication became its second major activity.

*Physical Review* was followed by *Reviews of Modern Physics* in 1929, and by *Physical Review Letters* in 1958. Over the years, *Physical Review* has subdivided into five separate sections as the fields of physics have proliferated and the number of submissions grew.

**Recent Years: Expanding Scientific Service through Programs**  
In more recent years, the activities of the Society have broadened considerably. Stimulated by the increase in Federal funding in the period after the second World War, and even more by the increased public involvement of scientists in the nineteen sixties, APS is active in public and governmental affairs, and in the international physics community.

In addition, the Society conducts extensive programs in education, public outreach, and media relations. APS has fourteen divisions and nine topical groups covering all areas of physics research. There are six forums that reflect the interest of its over 50,000 members in broader issues, and nine sections organized by geographical region.

## About the Physical Review Journals

In 1913, the APS took over the operation of the *Physical Review*, which had been founded in 1893 at Cornell University. The *Physical Review* was followed by *Reviews of Modern Physics* in 1929, and by *Physical Review Letters* in 1958. Over the years, *Physical Review* has subdivided into five separate sections A, B, C, D, E, as the fields of physics proliferated and the number of submissions grew. Two online-only journals, *Special Topics — Accelerators and Beams* and *Special Topics — Physics Education Research* were launched in 1998 and 2005, respectively. In 2008, to assist readers in identifying exceptional research, APS launched *Physics*, a free, online publication containing commentaries, condensed review articles, and summaries of selected papers in *Physical Review Letters* and the *Physical Review* series. In 2011, *Physical Review X* was added to the series as an online-only, fully open access journal, publishing exceptional original research papers from all areas of pure, applied, and interdisciplinary physics.

The journals of the APS embody the mission of the Society "to advance and diffuse the knowledge of Physics." We strive to produce journals of the highest quality, and at the same time, to keep our journals accessible to researchers and students at institutions of all types and sizes, everywhere in the world, through ongoing efforts to reduce production costs and through policies such as tiered pricing and reduced-price or free subscriptions for developing countries.

A PDF of our Journals Catalog is available [here](#).

### Physical Review Letters

In the late 1950's, Editor Sam Goudsmit decided to collect the Letters to the Editor of the *Physical Review* into a new standalone journal entitled *Physical Review Letters* (PRL). PRL featured short, important papers from all branches of physics, and quickly assumed a place among the most prestigious publications in any scientific discipline. Today PRL is the world's foremost physics letters journal, providing rapid publication of short reports of significant fundamental research in all fields of physics. International in scope, the journal provides its diverse readership with weekly coverage of major advances in physics and cross disciplinary developments. PRL's topical sections are devoted to general physics (including statistical and quantum mechanics, quantum information, etc.), gravitation and astrophysics; elementary particles and fields; nuclear physics; atomic, molecular, and optical physics; nonlinear dynamics, fluid dynamics, classical optics; plasma and beam physics; condensed matter; and soft-matter, biological, and interdisciplinary physics. [More information...](#)

### Reviews of Modern Physics

*Reviews of Modern Physics* (RMP), a part of the Physical Review journals since 1929, serves students and established researchers in physics and related fields. RMP brings the broad fundamental physics literature in established topical areas together and places it within the context of current trends in research and applications. Its review articles offer in-depth treatment of a research area, surveying recent work, and providing an introduction aimed at graduate students and nonspecialists. The journal's shorter Colloquia describe recent work of interest to all, especially work at the frontiers of physics, which may impact several different subfields. [More information...](#)

### Physical Review A

*Physical Review A* (PRA) provides a dependable resource of worldwide developments in the rapidly evolving area of atomic, molecular, and optical physics and related fundamental concepts. The journal contains articles on quantum mechanics including quantum information theory, atomic and molecular structure and dynamics, collisions and interactions (including interactions with surfaces and solids), clusters (including fullerenes), atomic and molecular processes in external fields, matter waves (including Bose-Einstein condensation), and optics, both quantum and classical. [More information...](#)

### Physical Review B

*Physical Review B* (PRB) is the largest and most comprehensive international journal specializing in condensed matter and materials physics. PRB appears monthly in two sections, B1 and B15; each section is further divided into two parts.

[B1: Structure, phase transitions, ferroelectricity, condensed systems, liquids, quantum solids, magnetism, superconductivity, superfluidity...](#)
